

Samsung B2B Lead Generation Page Design

Role

UI/UX Designer

Duration

3 months

Team

Solo Designer

The Challenge

"Samsung's current B2B presence doesn't speak to our specific needs in construction and PRS. We need partners who understand our industry challenges, not just suppliers pushing products."

— David Chen, Construction Project Manager

Samsung's B2B digital presence was underperforming in the Construction and Private Rental Sector (PRS) markets. Through early analysis, I identified that product-led messaging was failing to resonate with senior decision-makers who were seeking long-term strategic partners rather than transactional suppliers.

The challenge was to transform Samsung's B2B presence from a product showcase into a partnership platform—one that built trust, demonstrated industry understanding, and generated qualified leads.

The Problem I Identified

- Generic messaging that did not resonate with Construction and PRS audiences
- Missed opportunities to capture high-intent B2B leads
- Partnership stories and collaborative strengths were underutilised
- Lack of clear, industry-specific value propositions

Solution Approach I Developed

I designed a strategic B2B lead generation page focused on partnership storytelling, solution-led messaging, and clear value propositions for Construction and PRS decision-makers. The solution aimed to educate users, build credibility, and drive measurable engagement—while aligning with Samsung's broader business goals.

Design Process

1 Research: Understanding Business Alignment

What I needed to discover: I needed to understand Samsung's internal business goals alongside the specific expectations of Construction and PRS decision-makers, ensuring the design would support both strategic positioning and user needs.

My focus was on aligning stakeholder expectations with market realities to create messaging that felt relevant, credible, and valuable.

"We need Samsung to position themselves as a strategic partner who understands our long-term vision, not just another vendor trying to sell individual products."

— Sarah Williams, PRS Development Director

Research Approach

I structured my research to balance internal stakeholder insight with external market understanding.

Stakeholder Interviews: I conducted in-depth interviews with Samsung's internal teams to understand business objectives, success metrics, and competitive positioning.

Competitive Analysis: I analysed competitor B2B pages to identify common gaps, messaging weaknesses, and opportunities for differentiation.

Target Audience Analysis: I researched decision-makers within construction firms, developers, and architectural practices to understand partnership criteria and pain points.

Content Strategy Research: I reviewed existing Samsung content to identify areas where messaging lacked clarity, relevance, or industry focus.

Research Synthesis

I documented key findings through stakeholder interviews and competitive analysis to guide design decisions.

Stakeholder Interview Insights

Stakeholder interview insights

Competitive Analysis

Competitive analysis

Critical Finding #1

Internal stakeholders wanted Samsung positioned as a strategic partner, not a product supplier—requiring a fundamental shift in messaging.

Critical Finding #2

Target users valued solution storytelling, clarity, and visible partnership credibility over technical product specifications.

Critical Finding #3

Competitors underutilised partnership narratives, presenting a clear opportunity for Samsung to differentiate.

2 Insights: Defining the Strategic Challenge

What I needed to solve: Synthesising research insights, I identified the core challenge as repositioning Samsung's B2B presence to clearly communicate partnership value, industry understanding, and long-term collaboration.

The design needed to balance credibility, clarity, and conversion without feeling sales-driven.

Design Questions

- How might I position Samsung as a strategic solutions partner rather than a vendor?
- How might partnership value be communicated in a way that builds trust?
- How might leads be captured while providing genuine value to users?
- How might Samsung be differentiated in a competitive B2B landscape?

User Persona

I created a detailed persona representing a mid-to-senior B2B decision-maker within construction and PRS organisations. This persona guided tone, content hierarchy, and interaction decisions throughout the project. The persona reflected frustrations with generic lead forms, vague messaging, and lack of industry relevance.

User Persona

B2B decision-maker persona

3 Ideation: From Strategy to Structure

How I explored solutions: I explored multiple structural and messaging concepts using structured ideation techniques, then prioritised them based on business impact and alignment with user needs.

My goal was to create a page that felt consultative rather than promotional.

Concept Development Process

Through sketching and brainstorming, I explored different page structures and narratives. I then applied a value vs. effort matrix to prioritise concepts that best supported partnership positioning and lead quality.

Concept Sketches

I documented the ideation process to show concept evolution and decision rationale.

Ideation sketches and concepts

Content Strategy

I designed a narrative structure that guided users from industry understanding to partnership credibility to engagement. Rather than leading with products, the page focused on real-world partnership stories, industry-specific challenges and solutions, and clear, value-driven CTAs.

Content Flow

I documented the narrative structure to guide development priorities.

Content strategy and user flow

Core Features

Based on research and business requirements, I prioritised six key elements:

- **Partnership Storytelling**
Real-world case studies demonstrating collaboration
- **Solution Overviews**
Industry-specific value propositions
- **Trust Indicators**
Client testimonials and certifications
- **Strategic CTAs**
Consultation-focused calls-to-action
- **Educational Content**
Thought leadership and industry insights
- **Lead Qualification**
Smart forms that segmented prospects by project needs

Information Architecture

I designed a clear information architecture that supported logical content flow and intuitive navigation, integrating seamlessly with Samsung's existing B2B site structure.

Information architecture

4 Solution: Design & Validation

How my solution came to life: I iterated from low-fidelity wireframes to high-fidelity designs, validating decisions through stakeholder feedback and research insights.

The final design balanced business credibility, partnership messaging, and conversion optimisation.

Design Evolution Process

Early wireframes focused on content hierarchy and narrative clarity. These were refined through feedback sessions before moving into high-fidelity design aligned with Samsung's brand guidelines.

Wireframes

I created progressive wireframes to test content hierarchy and narrative flow before investing in high-fidelity design work.

Final Design Solution

I delivered a complete lead generation page optimised for clarity, trust, and engagement. Every element was designed to guide users toward meaningful action without feeling transactional.

High-Fidelity Design

The final design aligned with Samsung's brand standards while delivering a partnership-focused experience.

What I Validated

- Strong stakeholder alignment on partnership-focused messaging
- Clear value proposition differentiation from competitors
- Intuitive navigation requiring minimal explanation
- Strong visual hierarchy guiding users toward key actions

Improvements I Made

- Refined messaging based on stakeholder feedback
- Strengthened visual storytelling for partnership case studies
- Optimised form design for lead qualification
- Improved mobile responsiveness for field-based professionals

5 Results: Impact & Next Steps

What I achieved: I delivered a strategic B2B lead generation solution that repositioned Samsung as a trusted partner for Construction and PRS organisations.

This project demonstrated how UX design can transform business messaging from product-led to partnership-centred—improving engagement and lead quality.

Key Learnings from This Project

Partnership Over Product

B2B audiences respond more strongly to relationship-driven messaging than feature lists.

Industry Specificity Matters

Tailored content significantly improves credibility and engagement.

Stakeholder Alignment Is Critical

Early and ongoing collaboration ensures design decisions support business objectives.

Next Steps I Recommended

- **Launch within Samsung's Business Industries section**
- **Track engagement, form submissions, and lead quality**
- **A/B test messaging and layout variations**
- **Integrate with CRM for improved lead nurturing**

Final Reflection

Through this Samsung B2B project, I demonstrated how strategic UX design can reshape business positioning and digital communication. By focusing on partnership value rather than product promotion, I created more than a lead generation page—I built a foundation for stronger, more meaningful B2B relationships.

The most validating feedback came from stakeholders who said:

"This finally positions us as the strategic partner we want to be, not just another vendor."

This project reinforced my belief that great B2B design bridges business objectives with authentic customer connection.
